## Six Effective Ways to Protect Your Eyes During Summer

Dr. Avi Gurbaxani, Consultant Ophthalmologist, Medical Retina & Uveitis Specialist, Moorfields Eye Hospital Dubai shares six effective tips to protect your eyes in the summer.

- Whilst sun exposure is an excellent source of vitamin D, not taking the necessary protective measures during the summer can have damaging effects on the eyes. Spending a lot of time under direct sun light and heat may accelerate the aging process of the eyes and lead to conditions such as cataracts and macular degeneration.
- With temperatures reaching as high as 48°C in the UAE, our eyes are at risk of developing corneal burns, also known as photokeratitis. Therefore, it is extremely important to take the necessary precautions while enjoying summer activities in the sun.
